

ERASMUS PRESENTATION — TEACHING METHODOLOGY AND USE OF CURSOR

ERASMUS PRESENTATION — TEACHING METHODOLOGY

*Oral talk · ≈ 4 minutes · 5 slides Francisco
Javier Hernández Illán · IES Macià Abela ·
Crevillent Higher VET in Network Systems
Administration (ASIR)*

SLIDE 1 — TEACHING METHODOLOGY WITH STUDENTS

Daily flow: from the classroom to public documentation

- I plan the module in **Aules** (the official Valencian LMS, built on Moodle).
- **Lessons and tasks** are linked to my official notes.
- My **notes live on GitHub** and are written in Markdown.
- They are published as a website with **GitHub Pages + MkDocs Material**.
- Students get **living, technical, professional documentation**.

Aules is the official LMS of the Valencian education system, based on Moodle, used for planning, communication, resources and task submission.

SLIDE 2 — TEACHING TECH ECOSYSTEM

Four pieces → one single learning flow

- **Aules** · academic organisation
- **GitHub** · version control
- **Markdown** · technical writing
- **MkDocs Material** · web publishing

Documentation, code and infrastructure → managed with the same techniques.

SLIDE 3 — CASE STUDY · ASIR CROSS-MODULE PROJECT

A real IT infrastructure built throughout the school year

- **PBL + CBL:** Project- and Challenge-Based Learning.
- **Integration** of ASIR modules (Databases, OS, Web, Networking, Security).
- **Real infrastructure deployment:** Docker or AWS.
- **Continuous documentation** published on GitHub Pages.
- **Cooperative work** in teams of 2-3 students.

SLIDE 4 — PROJECT TOOLS AND DOCUMENTATION

The classroom as a real systems department

- **Living documentation** from day one, not in the last week.
- **Technical report** published as a professional website.
- **Professional GitHub use:** branches, Pull Requests, Issues, Releases.
- **Collaborative work** with traceability and shared authorship.
- **DevOps skills:** IaC, automation, continuous deployment.

Real industry workflows applied from the very first day.

SLIDE 5 — USING CURSOR AND AI IN DOCUMENTATION

AI accelerates reuse · it does not replace the teacher

- Notes and guides **already** exist in Markdown.
- Cursor helps me **refactor and improve** their structure.
- I **translate** materials into English for Erasmus contexts.
- I **summarise** long content into slide-friendly chunks.
- I **adapt** documentation to multiple formats (web, slides, report).
- Outcome: **higher teaching productivity** and consistent materials.

The teacher remains the author; AI is a reuse accelerator.

Speaker notes
